

PD-1 Antibody

Mouse Monoclonal

IHC PRIMARY ANTIBODIES

Diagnostic BioSystems launches a new (IVD) PD-1 antibody, aiding in the diagnosis of various cancers. The PD-L1/B7.1 and PD-L1/PD-1 pathways can protect tumors from cytotoxic T cells, ultimately inhibiting the antitumor immune response in two ways:

- Deactivating cytotoxic T cells in the tumor microenvironment
- Preventing priming and activation of new T cells in the lymph nodes and subsequent recruitment to the tumor.

PD-L1 binds to T-cell receptors B7.1 and PD-1, deactivating cytotoxic T cells. Once deactivated, T cells remain inhibited in the tumor microenvironment.

Why PD-1?

- PD-1 and PD-L1 are important checkpoints in tumor development
- PD-1/PD-L1 pathway is a promising target for treating NSCLC
- Receptor expressed primarily on activated T cell
- Aid to identify disease types to treatment

Formalin fixed paraffin embedded human Lung Squamous Cell Carcinoma tissue stained with Diagnostic BioSystems PD-1 antibody.

The PD-1 antibody has recently emerged as a powerful ancillary tool for predictive biomarkers with important therapeutic implications.

Diagnostic BioSystems PD-1

Antibody Type: Mouse Monoclonal

Clone: DBM15.1

Regulatory Status: IVD

Cellular Localization: Membrane

Format: Prediluted & Concentrated

Ordering Information

Product Description	Cat. No.	Pack size
PD-1 antibody	PDM190	6 ml; 25 ml
	Mob475	0.5 ml; 1 ml
