

One Step DAB Detection System

Anti Mouse/Rabbit UnoVue™ HRP/DAB Detection System

Diagnostic BioSystems one step detection system UnoVue is a non-biotin based kit and is suitable for demonstrating antigens in formalin-fixed paraffin-embedded tissues and cryostat sections. The UnoVue Detection System may also be used with blood smears, cytospins, and cell preparations. UnoVue have been developed by directly labelling anti-mouse and anti-rabbit immunoglobulins with enzymes using a proprietary tandem hyper-labelling technology. This ensures consistent and reproducible immunodetection of mouse and rabbit antibodies with a single reagent. Nuclear, cytoplasmic and membrane antigens in different types of tissues can be detected readily. The single step UnoVue Detection System enables faster staining procedures than traditional two-step methods using biotin and avidin/streptavidin conjugates, avidin/streptavidin conjugates, with significantly lower background.

Key Features

- ▶ Faster staining and lower background
- ▶ Compatible to detect both mouse and rabbit antibodies with single reagent
- ▶ Non-biotin based, one-step detection Kit
- ▶ Developed by superior tandem hyper-labelling technology - ensures consistent and reproducible immunodetection
- ▶ Suitable for FFPE tissue sections and cryostat sections
- ▶ Consistent and reliable results throughout the shelf-life of the product.

Progesterone Receptor (PR)

CD20 B-Cell

Cytokeratin 18
